

Free Access stall

The Free Access Stall from Vissing Agro is the most proven and strongest stall on today's market. The design of this stall allows the sow to enter and back out of the stall easily and when the sow is inside the stall, she is well protected, as it is impossible for another sow to enter the stall. It is possible to lock a complete row of stalls or each stall individually. Due to the design of the back gate, it is easy for the sow to back out of the stall and the gate is high enough to avoid another sow jumping up. The front gate is designed to make treatment of the sow easy and harmless.
